Jeffrey L. 5.0 out of 5 stars Im a weird guy I enjoy reading instructional manuals. As far as manuals go, this one is pretty darn good. Ive read it so far, cover to cover. I DO like the slowgoing nature of Mr. Taylors explanations I am not new to sewing stuff but Im new to auto upholstery doing over my 66 Lincoln and want to do it all myself.yeah, I know, a total gangsta car.it kicks ass.Ill send pics. So far this book is confidenceinspiring. I do like the different sections that start with basics and move forward to more advanced topics. I would like to see a bit more detail on technique, though Im thinking Ill learn this as I go. Something Ive learned so far bite the bullet and get yourself an older industrial machine with the proper walkingfoot to evenly feed material and give you consistent stitches. All is for waste if your finished project looks like shazz, right. There are options online for secondhand machines.look for them. As for the book, its wellworth the twenty bucks or so that I paid.Ill use it for years.It has everything from making a simple stadium cushion to automotive upholstery and then moves on to tonneau covers, boat and motorcycle upholstery and more. Beyond that, resources are included so that you can find the vinyl and marine foam you will need to do your projects. Definitely a worthwhile purchase if youre considering updating your belongings or going into business for yourself.Just looking for the perfect

This book does cover the basics of doing upholstery work. Beginning chapters teach you how to seam, make curves etc. Basic seat covers with additional tips for more modern seats. It also covers tops, headliners, door panels and carpets.There are also chapters on making boat seats, motorcycle seats and van interiors and more. Nice book. He recommends doing some practice work and yes, I have been sewing for years does not mean I will skip this step.It helped me accomplish a project I had been having trouble with. Gave me details about material tools foam and other items which gave me a good quality part when sewed.

I found this book online concerning automotive upholstery, and figured it would at least help me to understand how it was done. I must say that the author, Don Taylor, went through a lot to explain how the different things were done. The photos were excellent, and gave a fairly detailed look at how the parts fit. I do wish there had been more detailed closer looks at various assemblies. But all in all it was great. Not only do I now understand the basics of upholstery, I think I could take my time and also do the vehicles I own and reupholster the seat, doors, and floors.This version is an ebook and much easier for me to use. Very good book. I have reupholstered two of my cars and starting a third.It explains the very basics, the tools needed, terms of the trade, and even gives you a project to try out your skills and tools. It is plainly written so is easy to understand. The only things I did not like were the black and white pictures and that the book only really dealt with working with vinyl, and it has many sections on replacing vinyl tops on cars and convertables when I was hoping for more basic projects like normal car seats that are out of fabric instead of vinyl. One plus is it does have a section on boats seats and motorcycle seats. Overall, it is a good book to have especially

to get started with. Its good for beginners as well as those who have experience in other forms of upholstery as well. Hes clear and concise in his explanations. The picture are ok theyre in black and white, and I would say that the book is a little bit dated. I wish there were examples of more modern seats. Hopefully there will be a revised edition in the future. The basics will always remain the same, however, and you will learn lots from this book, including how to sew on an industrial sewing machine. If you want to learn auto upholstery, then this is the book you need to get started.

It would be five stars but the content is relatively old so its possible there may be materials in use today. Some of the content wraps or page breaks a little strangely, sometimes halfway through a table which doesnt make it as nice to read as a physical book. In general though I would say the book is well written, interesting, engaging and gives enough but not too much detail to be baffling. Sorry, we failed to record your vote. So, if you plan to redo your car, truck, motorhome, even airplane interior, the Automotive Upholstery Handbook is a guide you cannot be without. Learn stepbystep how to This was done for both the cushion and back.

You should now be ready to join those assemblies and corresponding end pieces to make a cushion and back cover. SEATCOVER ASSEMBLY FITTING Place the seat cushion on the bench. The old cover should still be securely fastened to the frame. You should always do your fitting with the old cover in place unless youre using it for a pattern. Otherwise youll end up with a cover thats too big unless you make allowances as you did when making the stadiumcushion cover. As shown in the accompanying photo, I clamped the pleat assembly to the seat cushion after making sure it was centered lefttoright and fronttoback. Centering is very important, especially lefttoright. If the cushion and back covers are centered correctly, the pleats will align when the cushion and back are assembled. If the centers are off, the pleats will also be off. So measure carefully. I use clamps for the initial fitting so I can move the cover easily. When Im satisfied with the placement I pin the cover in place. This is more secure than clamps. As shown, I placed a pin in the front and back of the welt where it meets the end caps. Mark these locations with chalk. When you remove the cover, make a nick or Vnotch with your scissors at the chalk mark. This is to position the end cap to the pleats when youre ready to sew them together. Remember how you made nicks in the corners of the facings on your stadium cushion. This assured that the facepiece corners were correctly aligned. Our cookies policy explains more about cookies and you can change your settings at any time. Leather upholstery is a natural product that changes and acquires a beautiful patina over time. Regular cleaning and treatment are required in order that the properties and colours of the leather shall be preserved. To achieve best results, Volvo recommends cleaning and application of the protective cream one to four times per year or more if required. Cleaning the leather upholstery Apply the leather cleaner to a damp sponge and squeeze until a foam is created. Use the sponge on the stain in a circular motion. Thoroughly dampen the stain using the sponge, allow the sponge to absorb the stain without scrubbing. Wipe the stain with a soft cloth and allow the leather to dry thoroughly. Protecting the leather upholstery Apply a small amount of leather protective agent to a cloth and then apply it to the leather in light circular motions. Allow to dry for about 20 minutes. Protecting the leather upholstery makes it more resistant to the stresses from the sun's UV radiation.
