Even reliable brands like Bosch are susceptible to longterm wear and tear or an unforeseen part failure. Sometimes the problem is obvious. A wornout seal, for example, will leave a puddle on your kitchen floor. But other Bosch dishwasher problems arent so obvious. Two of the most common are a soap dispenser failure and the dishwasher not filling. Need help finding your model number. Most Common Problems Your Bosch Exxcel or Classixx dishwasher features an electronic diagnostic system for troubleshooting various malfunctions. Sometimes, however, those error codes can be confusing. Have a look at our list of symptoms, then enter your model number in the search field. Well offer you a range of possible causes and help you find the right one. Youll end up with the right replacement part to solve the problem and the confidence to do the repair yourself.

Chapter 8. Exhaust system. To remove motor to. Disconnect wires from water valve, including ground wire. Remove two 2 T20 Torx screws from water valve. Pull valve out from dishwasher and disconnect water hose from rear of valve. However, removing them will provide easier access. To remove outer door Tools needed T20 Torx screwdriver. 1. Remove six T20 Torx inner door screws below fascia panel three per side 1. 2.

[stellabakingcompany.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626c5c02a38b8---canon-mvx20i-manual.pdf](http://stellabakingcompany.com/wp-content/plugins/formcraft/file-upload/server/content/files/1626c5c02a38b8---canon-mvx20i-manual.pdf)

Carefully pull bottom of outer door out from dishwasher until top door tabs clear, then pull door down until it releases from dishwasher 2. Take care to not scratch outer door. 3. Remove 1piece foam or two plastic door guards 3. The plastic door guards occasionally fall out when the outer door is removed. 1 2 NOTE Circulation pump 239144 motor is rated 120V, 60 Hz, 160W, insulation class A. Motor has an autoreset thermal protector and uses a 10F capacitor. 3 HINT The fascia panel and

door don't need to be removed to access the circulation pump. Dishwashers may have long or short side panels, depending on model. Remove right toe kick bracket by removing T20 Torx screw 2. Remove T20 Torx screws from front right bottom corner holding tank to base 3. Raise and block up tank as shown with strut onto base 5a, sliding a piece of wood or other solid material between the tank and base to keep tank from falling back onto base 5b. Screw 1 2 CAUTION Don't turn dishwashers upsidetank access. Disconnect wire harness from motor after carefully noting connections 1. For older models, lift motor up from base. To release motor from pump housing, twist motor to the right clockwise. Some force may be required. Pull motor out from pump housing. Disconnect wire harnesses from module after noting connector locations. Pry out metal console tabs holding module to console. Carefully pry back plastic tabs, then slide module from console. Removing door screws Removing fascia panel Viewing control module Check connections before replacing modules. Disconnecting wires TIP Modules have been replaced when problem was loose connections. Before replacing modules, check connections first. Modules are mounted on the base where base wiring connectors were, not behind fascia panels. HINT Apexx control modules cannot be checked or have resistances measured from the front of dishwashers. If not, then follow these instructions to block up tanks.

Consult test programs and fault codes for each dishwasher before using codes below. This means the module has timed out due to an unidentified heating problem all heating related parts must be checked until the problem is found. TIP Modules have been replaced when problem was loose connections. Before replacing modules, check connections first. START If no, module is working fine. Has dishwasher stopped washing and is showing a "1" in the display. NO NOTE The heating problem must be fixed before the module will reset and stop showing a "1" in the display. The module resets after the 1st run. However, the door must be removed to completely remove the tank. HINT Remove all water from the sump and hoses before accessing the heater when the dishwasher is flipped on its back, water can enter the water fill assembly diaphragm and cause the dishwasher to not fill properly. To separate base from tank 1 1. Carefully lay dishwasher on its back. 2. Carefully pull door springs out from base. Softer bearing heaters don't fit in older models and older heaters don't fit in softer bearing models. HINT If needed, use rinseaid to lubricate gaskets to make it easier to assemble heater to sump and pump. If heaters are replaced, these parts are replaced too. With heater on during test program, measure dishwasher incoming current black wire. If , heater has failed opened. Replace faulty module. Filtered water enters the heater from the circulation pump. The heater heats water when the flow switch signals water is present. The NTC senses water temperature. The Hilimit shuts off the heater if the water gets too hot. Separate actuators aren't needed. Water switch disk Heater assy. Older pumps had 6vanes. Cover door edges and remove dispenser carefully. Dispensers can have reed switches or optical rinseaid sensors.

Dosage plunger Linkage 490472 shown Optical sensor Magnetic float Wax motor Condensation tube older vented dispenser NOTE The white plastic linkage opens the detergent dispenser door, then cocks in place to dispense rinseaid when the wax motor operates again. After the 2nd operation, the linkage resets for the next wash. HINT Optical dispensers have different connections and can't be substituted for reed switch dispensers. Note 431413 top load dispensers also use solenoid actuators instead of wax motors. Reed switch Cable guide A wax motor heats wax, which expands and pushes a plunger. Transmitter diode Transmitter diode Optical rinseaid sensor Optical rinseaid sensor Prism Prism Receiver diode With rinseaid present, the optical receiver senses a diffused light beam. Receiver diode When rinseaid has run out, the optical receiver senses a strong light beam. HINT Optical dispensers have different connections and can't be substituted for reed switch dispensers. Cable guide Standard dispenser Topload dispenser. To disassemble door latches 1. Remove T20 Torx fascia panel screws from inner door. 2. Lower fascia panel from door. 3. Locate door latch in console. 4. Bend out console metal tabs to allow latch removal. NOTE Use only latches specified for each model. Most customers won't notice if an aqua sensor fails. Its not necessary to block up the

tank to reach the aqua sensor. Transmitter diode HINT To change out the aqua sensor, pull off the connector and pull out the aqua sensor toward the rear of the dishwasher. The aqua sensor slides into slots in the sump. Make sure the aqua sensor is properly inserted into the slots. It can be a pressurefill with diaphragm or timefill, depending on model. Diaphragm Water fill switch No diaphragm or water fill switch on time fill models Float switch Float Float Pressurefill Timefill HINT Most water fill assembly repairs involve replacing microswitches.

Occasionally tank insulation or other debris can prevent the diaphragm switch lever from operating, allowing overfilling. NOTE Water inlet valves for time and pressurefill look the same, but pressurefill valves can't be used on timefill models. Presently, both pressurefill and timefill models use timefill valve 425458. New 15mm hinge bushing with latches Hinge Plate Old 14mm hinge bushing with lock Hinge Lever Hinge Bushing Lock Pulley NOTE New and old hinge levers and bushings can't be mixed and matched since new hinge levers have 15mm holes to fit new hinge bushings and old hinge levers had 14mm holes for old hinge bushings and locks. TIP Unlike old hinge bushings, new hinge bushings are selflocking and don't need separate locks. To remove doors when new hinge bushings are used, spread latches apart until door pins clear latches.
