Rechargeable battery LEVEL 1 LEVEL 2 LEVEL 3 LEVEL 4 Some functions disabled Dis charge
Battery charges in the light. The following guidelines give an idea of the charging time required to recover from a single illumination operation. If the display of the watch is blank. Current Time Setting This watch adjusts its time setting automatically in accordance with a time calibration signal. You can also perform a manual procedure to set the time and date, when necessary. See "Timekeeping" for information about manual settings. If it does not, it should adjust automatically after the next auto receive operation in the middle of the night. For more information, see "To perform manual receive". Make sure there are no metal objects nearby. Inside or among buildings Inside a vehicle Near household appliances or office equipment, or a mobile phone Near a construction site, airport, or other sources of electrical noise Near high tension power lines Among or behind mountains When any auto receive is successful, the remaining auto receive operations are not performed. Do not perform any button operation within five minutes before or after any one of the calibration times. When only one reception is successful, the watch uses the data of the successful reception. About the Receiving Indicator The receiving indicator shows the strength of the calibration signal being received. For best reception, be sure to keep the watch in a location where signal strength is strongest. The Level 3 receiving indicator will not be displayed if signal

reception was unsuccessful or after you adjust the current time setting manually. Note, however, that the Level 3 receiving indicator is cleared from the display at midnight each day. To perform manual receive 1. Place the watch on a stable surface so its top 12 o'clock side is facing towards a window. 2. In the Timekeeping Mode, hold down C for about two seconds until RC. To turn auto receive on and off 1. <http://www.zstelc.eu/content/file/eiki-lc-x1-manual.xml>

In the Timekeeping Mode, press C to display the Last Signal screen. 2. Hold down A until the current auto receive setting ON or OFF starts to flash. The Last Signal screen shows the date and time of the last successful time calibration signal reception. DST indicator Seconds Signal Receive Troubleshooting Check the following points whenever you experience problems with calibration signal reception. Problem Cannot perform manual receive. Auto receive is turned on, but the Level 3 receiving indicator does not appear on the display. Time setting is incorrect following signal reception. Other city codes are not affected. DST indicator Alarms The Alarm Mode gives you a choice of four onetime alarms and one snooze alarm. You can configure SNZ as a snooze alarm only. Hourly time signal on indicator Countdown Timer You can set the countdown timer within a range of one to 60 minutes. This returns the countdown time to its starting value. See "To set the time and date" for more information. Power Supply This watch is equipped with a solar cell and a special rechargeable battery secondary battery that is charged by the electrical power produced by the solar cell. The illustration shown below shows how you should position the watch for charging. Charging is reduced significantly if the face is covered even partially. However, after very long use, the rechargeable battery may lose its ability to achieve a full charge. This helps to keep the rechargeable battery from going dead. Function Status All functions enabled. All functions enabled. Auto and manual receive, beeper tone, and illumination disabled. Auto and manual receive, beeper tone, illumination, and display disabled. All functions, including timekeeping, disabled and initialized. Battery Power Indicator and Recover Indicator The battery power indicator shows you the current power level of the rechargeable battery.

Illumination Beeper tone Time calibration signal reception C Start Stop Elapsed Time. Restart Clear C Stop C C A Split Time C Start Split SPL display ed. Split release Clear A. T o measure times with the stopwatch After some time, battery power will recov er and the recover indicator will disappear, indicating that the above functions are enabled again. Charging Precautions Cer tain charging conditions can cause the watch to become v e ry hot. A void leaving the watch in the areas described below whenever charging its rechargeable battery. Also note that allowing the watch to become v ery hot can cause its liquid cr ystal display to blac k out. The appearance of the LCD should become nor mal again when the watch returns to a lower temperature. Warning! Leaving the watch in bright light to charge its rechargeable battery can cause it to become quite hot. Take care when handling the watc h to avoid burn injury. Because of this, W orld Time Mode times will not be correct if you do not select the proper Home City code before setting the time and date in the Timekeeping Mode. T o set the time and date 1. In the Timekeeping Mode, hold down A until the city code starts to flash, which indicates the setting screen. 2. Press B to change the flashing contents in the sequence shown below to select other settings. Daylight Saving Time DST Daylight Sa ving Time summer time advances the time setting by one hour from Standard Time. Remember that not all countries or ev en local areas use Da ylight Saving Time. The time calibration signal transmitted from F ort Collins includes both Standard Time and DST data. T o change the Daylight Saving Time summer time setting 1. In the Timekeeping Mode, hold down A until the city code star ts to flash, which indicates the setting screen. 2.

<https://www.becompta.be/emploi/bose-lifestyle-powered-speaker-system-manual>

Press B and the DST setting screen appears. 3. Use C to cycle through the DST settings in the sequence shown below. It also contains important precautions and notes about the various features and functions of this watch. Button Operation T one The button operation tone sounds any time y ou press one of the watch ' s buttons. T o turn the button operation tone on and off In any mode except when a setting screen is on the display, hold down B to toggle the button operation tone on MUTE

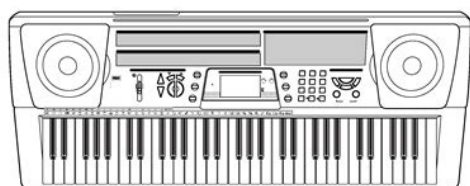

not displayed and off MUTE displayed. Power Saving Function When turned on, the Power Saving function enters a sleep state automatically whenever the watch is left in an area where it is dark for a certain period. The table below shows how watch functions are affected by the Power Saving function. If the watch is already in the sleep state when 6:00 AM arrives, however, it will remain in the sleep state. In most cases, holding down these buttons during a scroll operation scrolls through the data at high speed. Initial Screens When you enter the World Time or Alarm Mode, the data you were viewing when you last exited the mode appears first. The following are the initial factory defaults for these settings. It is based upon carefully maintained atomic cesium clocks that keep time accurately to within microseconds. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. See All Buying Options Add to Wish List Disabling it will result in some disabled or missing features. You can still see all customer reviews for the product. It took a day or so for the Waveceptor to sync up to the atomic clock which I found ironic since I live very close to Ft.

<http://d-frax.com/images/canon-550d-owners-manual.pdf>

Collins where they claim the transmitter is, but it has worked perfectly since it figured out where in the world I am. And this may have also been caused by a dwindling charge in the battery from having been in a dark box so long. Once I set it in the sun for a good preliminary charge, it has been working fine. I haven't tried out any of the features other than the display light works great!, but I'm happy to report no unexpected alarms going off in the middle of the night as I experienced with my previous cheapos. Low-tono maintenance reliability is what I was looking for, and this watch is no disappointment so far. Adjusting the band length was a little daunting at first. The bands on the other watches I've owned had pins to remove, but this one has a hole on the back of each link giving you access to a sliding latch, and you move the latch with a tool I ended up using an icepick-like scoring tool in the direction of the arrow stamped onto the link to release the link. Moving this latch was difficult, which is probably a good thing because you don't want it releasing its hold on the other link when you least expect it, but it would have been nice to have documentation that includes suggestions for how to do this properly. Once I figured it out, I was able to remove the necessary links and fit the watch to my wrist comfortably. All in all I'm very satisfied with this watch and look forward to many maintenance-free years with it fingers crossed. Now if I can just figure out what to

do with my drawerful of dead cheapo watches. I can barely feel this on my wrist because it is very thin and much lighter than anything else I wear. I wanted an extremely accurate watch. This one sets itself every day. You do have to leave it near a window rather than on your dresser or wherever so that it will receive the atomic signal.

It took a few nights for it to find the signal and the watch must be placed in a specific position to receive the signal read the instructions and look at the illustration. The band is very difficult to size. The tool Amazon sold me does not work with this band. The tools for bands are unique as there are several types of bands and tools for each. The face of the watch looks a bit inexpensive, like a cheaper watch, and the band is best professionally resized, so four stars instead of five, but it is a very nice daily watch which is extremely accurate. Updated 3 14 2011 Watch band broke in two after 6 months. Please try again later. James W. Ramsay 4.0 out of 5 stars It took a day or so for the Waveceptor to sync up to the atomic clock which I found ironic since I live very close to Ft. Now if I can just figure out what to do with my drawerful of dead cheapo watches. Please try again later. Please try again later. Sandstone 4.0 out of 5 stars This makes it a category II watch nonwater resistant is cat I, 50 meters is cat III, 100 meters is cat IV, 200300 meters is cat V, suitable for splashes, rain, but not swimming. 2. The band I have smaller wrists, and the links of the band are fairly limited in their hinge movement. When sized down the band does not contour nicely to a smaller wrist size. It has a 15 mm lug size, so replacement band options are somewhat limited. 3. The stopwatch and countdown timer both have a one hour limit. Now, aside from these issues, the watch is otherwise terrific. The display is extremely readable, and the watch is both functional and stylish. By the way, the module number for this watch is 3023, go to the Casio website and look this up as a PDF file. It is much easier to read onscreen than in the tiny, tightly folded booklet that comes with the watch. May 27th addendum I ended up replacing the original band with a Casio brand 14 mm black plastic strap. The 16 looked a little too big.

<https://snabavto.com/wp-content/plugins/formcraft/file-upload/server/content/files/162745c5c8fe77---brother-5240-manual.pdf>

The 14 works great, is very comfortable, and looks surprisingly good with the watch. Please try again later. Please try again later. Very Legible display, Love it! The band has never given me any issues and I wear it as my primary watch all the time. The silver does not come off the watch someone mentioned theirs did. This watch does fine and gives no issues. I bought this watch in 2007, Im writing this review in 2009. I love this watch! I still wear it! The watch picks up the time very routinely at minimum 6 times per week on an average from one of the atomic clock radio signals. The display is great I owned the other version with the inverse display, and that one was hateful for reading. The time synchronization works great for me, and the watch is highly reliable. I typically dont bother looking at other watches at malls etc, because nothing can compete with this watch for me. I was able to resize my watch bracelet with my swiss army pocket knife the leather punch tool. Im very pleased with this watch, I work in an environment where its needed to have a good time reference, and mine is very accurate with the time synchronization. Id highly recommend this watch to others. While it is not as stylish as some of the fancier sports watches, it has what I want 1 ACCURACY, synchronizes reliably with Atomic Clock Standard. 2 no need for a battery, reliable power supply even though I am mostly indoors this impresses me that it can sustain a charge with indoor light only. 3 Rugged enough to endure being on my arm in a working environment, 4 Water resistant for my needs I can wear it in the shower, do dishes with it, etc as well. 5 VERY legible display. I find the other features of this watch useful, the alternate time zone, the stopwatch and alarms as well. One more thing thats very impressive, I work indoors mostly, and am mostly indoors.

I sadly am not in the sun or daylight often, yet this watch always has ample power in its reserve and has NEVER had a dilemma with power. When i bought the watch initially, I recognized this and would place the watch outside in the sun hoping squirrels, crows or other creatures wouldnt take it,

yet THIS WAS UNNECESSARY. This watch obtains all the power it needs from the indoor light I am in most of the time. I have long given up setting my watch outside it really is not needed. This is the very long way to say that this watch's ability to keep a reliable charge is truly impressive. I highly recommend this watch, even though it does not have the highstyle of other fancy sports watches, this watch seriously makes up for this in its reliability, accuracy and solid function. Please try again later. Please try again later. Alan 5.0 out of 5 stars I have owned a couple of Casio watches in the past, all with 5 alarms and a countdown timer which I use a lot, so I wanted a watch with these features. Previous watches also had a data bank which this does not, but I never used that feature anyway. I am intrigued by the solar charging and the atomic timekeeping which my previous watches did not have. I tried to manually get the time signal during the day by a window, as suggested but the watch could not pick up the signal strongly enough to set it. However, last night it picked up the signal while the watch was still on my wrist, not even close to a window. The reception must be better at night this was in Akron, Ohio 1,440 miles from Fort Collins, Colorado where the signal originates. The other thing I like about this watch is that there are no buttons on the left side. My previous Casio watches had buttons on both sides and the ones on the left would rub against the cuff of my shirt and cause the edge of the cuff to shred. Several shirts got ruined this way. Not a problem with this watch since all of the buttons are on the right and the left side is smooth.

This is also the best looking Casio I have owned, and I love being able to see the time without putting on my glasses large digits. The only disappointment for me is that the alarm is not very loud and it only goes for 10 seconds. Also, it would be nice to be able to adjust the time interval of the snooze preset to 5 minutes, but I don't know of any watch that has that feature. The band is very sturdy, but I had some trouble removing a couple of links so it would fit my wrist. I couldn't find any directions on how to do this, but after some trial and error I figured it out I first removed one of the spring loaded pins that holds the end of the band to the watch, so that the inside of the band was more accessible. I used a very tiny screw driver to push one end of the pin toward the middle to dislodge it from the small hole in the watch, and then twisted the band to pull the pin sideways and out. On the inside of the removable links is a small slot with a sliding piece inside which has an indent. I used a large paper clip it fit this indent, but I had to hold the end of the paper clip with a pair of pliers I used vicegrips in order to get the inside piece to move. Don't be surprised it takes a LOT of force to move this in the direction of the arrow stamped on the inside of the link. You will have to do this with two links next to each other in order to remove one. The inside piece that slides to release the link is not spring loaded, so at least it stays in place once it is moved. Then you can twist the link slightly to dislodge it from the adjoining link. After the link is removed, slide the new link in place with a slight twisting motion, and then use the paper clip to slide the inner piece back to lock the link in place. I don't know why it should take so much force to get this locking mechanism to move, but at least you can be sure that this band will not fall apart on your wrist. Please try again later. Please try again later. Too Tall 3.

0 out of 5 stars I can barely feel this on my wrist because it is very thin and much lighter than anything else I wear. Updated 3 14 2011 Watch band broke in two after 6 months. Please try again later. Please try again later. Strictly an Amateur 4.0 out of 5 stars It is the smallest and most attractive waterproof atomic watch that I have been able to find. The numbers are large enough that even my old eyes can read them. It would be nice if it would display the date and the day at the same time, but that is a relatively minor problem. The button on the front to turn on the backlight is a little difficult to press with large fingers. Shortening the band was difficult, but possible. It is different than most of the watchbands that I have had and I could not find any instructions either in the manual or on the web. Some short instructions saying that you have to put a hard sharp tool like an ice pick into the little hole in the bottom of the link, and slide it in the direction of the arrow would have been a tremendous help. It takes quite a little force to do it and if your tool isn't hardened steel, it will probably bend. Please try again later. Please try again later. K. Tam 5.0 out of

5 stars The watch is easy to program and the functions are readily accessible. I used the dual time on my trip to the west coast. The stopwatch comes in handy sometimes. In North Texas, the watch easily syncs up each night with the WWVB Atomic Clock time signal transmitted from Colorado. The watch had a medium charge when I received it, but became fully charged after exposing it to sunlight for a day. What about the downsides. In the time zone selection for the dual time, you cant go westbound, only eastbound, so if you miss the zone you want you will have to press a button 30 times or so until the one you want comes up again. The metal wristband is huge, which will require resizing unless you are a football player.

I ended up replaced the metal wristband with a rubber wristband which reduced the weight considerably. The watch is not thick, but has a somewhat large footprint. I guess the size is in line with other watches these days, but my previous 15 year old watch was much smaller. All in all though, I am quite pleased. This watch is solar powered and doesnt need to have its battery replaced, so I wont miss having the bother of setting up a watch again after replacing a battery annually. I expect to be enjoying this watch for many years. Update April 2011 Still very happy with this watch. No problems so far!Please try again later. Please try again later. K. Tam 5.0 out of 5 stars The watch is easy to program and the functions are readily accessible. I expect to be enjoying this watch for many years.Please try again later. Please try again later. ShinyTop 5.0 out of 5 stars The band is big enough to fit large wrists. I had to remove three links. Once I figured out that after moving the latch mechanism you need to lift the link off the band it was easy to adjust the length to my size. I live in NW Florida and the watch has synced every day, although not always on the first try. The watch arrived fully charged and has maintained full charge since I got, even with all my playing with features. I work in an office and have just let the indoor lights keep it charged. The display is easily read even without my reading glasses. The watch is not light although ligher than the watch it replaced. It is very thin which I wanted. Received the watch on Wednesday, the usual excellent service from Amazon.Please try again later. Please try again later. K. Leshner 5.0 out of 5 stars I read descriptions of several watches but the information was always incomplete I recommend going to the manufactures website and downloading the manual; that accurately showed the features which sold me on this watch.

Atomic time is a nice feature if you need one second accuracy in 3 million years the battery will probably go bad first. I wanted a stainless steel case and strap and a scratch resistant face which this watch has. Its easy to read and has several timer features which I use frequently. The date is tiny but you can program a separate calendar screen if thats a problem. I was able to adjust the band size myself but you need good tool skills to do that. I like the watch it looks good, the buttons are easy to operate, and the technical features are interesting.Please try again later. Please try again later.
